Disaster Recovery (DR) Plan

Owner: [Your Name] | Version 1.0 | Last reviewed: 2026-10-29

1. Backup Schedule & Storage

Data	Frequency	Retention	Storage Location
Database	Daily full (2:00 AM) + hourly incremental	30 days	Primary server + cloud bucket (off-site)
App files / configs	Daily	14 days	Cloud bucket (versioned)
Full system image	Weekly (Sunday)	4 weeks	Off-site / secondary region

Backups are encrypted; a test restore is performed monthly.

2. Restore Procedure (RTO 4 hrs | RPO 1 hr)

1. **Detect & declare:** confirm incident, notify DR lead.
2. **Assess:** identify affected systems and last good backup.
3. **Isolate:** disconnect affected systems.
4. **Provision:** prepare a clean server/environment.
5. **Restore data:** latest full backup, then incrementals.
6. **Restore app & config:** redeploy files and configuration.
7. **Verify:** integrity checks, smoke tests, user access.
8. **Go live:** switch traffic back, monitor 24 hrs.
9. **Document:** log timeline and lessons learned.

3. Escalation Contacts & Communication Plan

Level	Role	Name	Phone / Email
L1	System Administrator	[Name]	[Phone / Email]
L2	DR Lead / Project Manager	[Name]	[Phone / Email]
L3	Management / Stakeholder	[Name]	[Phone / Email]
Vendor	Cloud / Hosting Support	[Name]	[Phone / Email]

L1 alerts L2 within 15 min; L2 informs L3 within 30 min; stakeholder updates every hour until resolved.

4. Tabletop Drill

Scenario: Primary database server fails after a corrupted update. Walk through detection, escalation, restore and verification with stakeholders; record gaps and action items in the Findings Record.
